*Mounting screws included*

*Available in two different models:*

*Wired, to answer and release telephone calls by lifting and replacing the handset from the cradle*

*Unwired, to serve as a desktop telephone cradle only*

# Desktop Handset Cradle

The Desktop Handset Cradle from Avtec provides a custom Avtec base with a secure, durable cradle for holding a handset.

This product is available in two models: the wired and unwired. The wired model connects to the Scout console Jack Box to enable dispatchers to answer and release telephone calls automatically by simply lifting and replacing the handset from the handset cradle. (This capability is available with Scout Version 2.5.) The unwired model serves as a simple desktop holder for a dispatcher's handset.
