*Mobility included*

*Mini VPGate voice gateway included*

*Intercoms included*

*Radio, telephony, and auxiliary input/output endpoint support*

*Scout Instant Recall Recorder (IRR) included*

*Convenient Subscription Offering*

# Scout Select: Scout 800 and Scout 400

Avtec's Scout Select dispatching solution is tailor-made for small-scale environments. It provides the rich dispatching functions of a traditional Scout system in an easy-to-install package.

Scout Select systems provide the quality, reliability, and mission-critical audio upon which Avtec's largest customers depend. In addition, these scalable solutions offer a migration path for a dispatching center that expects future growth.

The Scout Select systems include Scout 800 and Scout 400. Each system is available in two package options: basic or advanced. Choose the package depending upon the types of endpoints to which the system connects. The basic package accesses endpoints supported by A and B licenses. The advanced package enables wireline interfaces such as MOTOTRBO™ IP Site Connect, P25, DFSI/CSSI, IDAS IP Conventional, Kenwood NEXEDGE Trunking, and DMR AIS (Tier II and Tier III) in addition to the SIP, Outpost, ED-137, and advanced control station interfaces that the basic package supports.

Scout 800 and Scout 400 process audio using the Software Audio Package. Scout Select systems are available through Avtec's certified dealers and are offered with perpetual licensing as well as subscription licensing.
